

## **CAMEROON**

The pilot survey in Cameroon was conducted in May 2002. The geographic regions included in the survey were the capital city Yaoundé as well as Littoral, South West and North West provinces. Sectors included in the survey were the private for-profit sector, the public sector, and the charitable mission sector. In all three sectors, patient price data were collected, and the number of facilities successfully surveyed in each sector were 9, 13, and 10, respectively. No procurement price data were available.
