

Addendum to the El Salvador survey report

Please note that the report was published before the data was sent to HAI to undertake data quality checks. Some corrections were subsequently made, so there are instances where the data in the HAI database differs to the data in the report. Also to note is that public sector availability data in the report includes additional strengths and/or combinations for 10 medicines. In the database, public sector availability is based solely on the medicine strength and dose form listed.
