

Addendum to the Mauritius survey conducted in August 2008

On reviewing the survey data, HAI noted that Esidrex was listed as an originator brand of hydrochlorothiazide rather than as a generic. Amending this has resulted in minor changes to the overall survey findings. Therefore, the data in the HAI price database is slightly different to what is in the survey report.

In addition, MSH 2007 prices were used as the reference source for this survey (not 2006 as stated in the report).
