

Addendum to the Gauteng Province, South Africa survey report

Dispensing doctor sector

In the dispensing doctor sector, 26 outlets were surveyed. Medicine availability data was recorded for all 26 outlets, but medicine price data was recorded for only 15 (as 11 doctors were charging a fixed fee for medicines rather than the actual price).

In the survey report, summary availability data in Table 26/Figure 10 and Table 41/Figure 28 are based on 26 outlets. The availability of individual medicines in Table 27 and Annex 2 is based on 15 outlets.

The data provided to HAI relates to 15 outlets (not 26) so this has been included in the database.

Public procurement sector

Availability data in the public (government) procurement sector was collected from the provincial medical store (depot) – see section 3.4.1 of the survey report. This data was not provided to HAI so has not been included in the database.

Note: the survey report was only provided to HAI after its publication.
